

COMPUTERIZED MEDICAL DIAGNOSTIC SYSTEM UTILIZING LIST-BASED PROCESSING

Abstract of the Disclosure

5 A system and method for providing computerized, knowledge-based medical
diagnostic advice. The medical advice is provided to the general public over a network,
such as a telephone network with the use of a telephone or the Internet with the use of an
Internet access device. Alternatively, the medical advice can be provided to a patient in a
stand-alone mode by use of a computer. The invention utilizes a list-based processing
method of generating and executing diagnostic scripts. For the purpose of diagnosing a
10 health problem of a patient, medical knowledge is organized into a list of the diseases to be
considered. Each disease on the disease list includes a list of symptoms that is checked in
a patient. Each symptom on the symptom list is then further described as a response to a
list of one or more questions asked of the patient about the symptom. This triply-nested
list structure is converted by suitable data structure transformations into a script that is
15 stored. When a patient requires diagnosis, the script is played back as a sequence of
questions. The responses of the patient are analyzed and converted into symptoms. The
symptoms are accumulated into diseases. Finally the diseases are selected and reported as
a diagnosis.
